

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<thinking process >

Step 1 : We know James runs 3 sprints each day .

Step 2 : Each sprint is 60 meters .

So , the distance per day = 3 sprints $\times$ 60 meters = 180 meters .

Step 3 : He does this 3 times a week .

So , total distance per week = 180 meters/day $\times$ 3 days = 540 meters .

</thinking process >

< answer > 540 </answer >
