

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

James runs 3 sprints 3 times a week. He runs 60 meters each sprint. To find the total meters, we multiply the number of sprints by the number of times a week and the distance of each sprint. $3 \times 3 \times 60 = 180$ meters.

James runs 3 sprints 3 times a week. He runs 60 meters each sprint. To find the total meters, we multiply the number of sprints by the number of times a week and the distance of each sprint. $3 \times 3 \times 60 = 180$ meters.

$3 \times 3 \times 60 = 180$ meters.

<answer>180</answer>
