

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

We are given :

- James runs 3 sprints per week .
- Each sprint is 60 meters .
- He does this 3 times a week .

We need to find the total distance he runs in a week .

Step-by-step :

- 1 . Distance per sprint = 60 meters
- 2 . Number of sprints per week = 3
- 3 . Total distance per week = Number of sprints × Distance per sprint
- 4 . Total distance = 3 sprints × 60 meters = 180 meters

∴ So , James runs 180 meters a week .

< answer > 180 < /answer >
