

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<reasoning process here> The Glasgow Coma Scale (GCS) is a neurological scale used to assess a person's level of consciousness . It evaluates three components : eye opening , verbal response , and motor response . Each component is scored on a scale that contributes to a total score ranging from a minimum of 3 to a maximum of 15 . A score of 3 indicates deep unconsciousness , while a score of 15 indicates full consciousness . The scale does not go above 15 or below 3 . Therefore , the minimum possible value is 3 , and the maximum possible value is 15 .

Note : Some sources might mention a range up to 18 , but that is not standard for the GCS . The standard range is 3 to 15 . So the correct range is minimum 3 , maximum 15 .</reasoning process>

<answer>A . Minimum = 3 , Maximum = 15 </answer>
