

Question:

Shock causes:

Answer Choices:

- A. Stagnant hypoxia
- B. Anemic hypoxia
- C. Hypoxic hypoxia
- D. Histotoxic hypoxia

Reasoning + Answer:

<tool_call> reasoning process here

Shock leads to inadequate blood flow to tissues , resulting in insufficient oxygen delivery to the cells . This is primarily due to impaired perfusion , not due to a decrease in oxygen content of the blood or impaired cellular utilization of oxygen .

This condition is classified as stagnant hypoxia , where the blood flow is reduced or absent in some regions , leading to a stagnation of blood flow and consequently , inadequate oxygen delivery despite normal oxygen content in the blood .

Therefore , the correct answer is stagnant hypoxia .

< answer > Stagnant hypoxia </ answer >
