

Question:

A cowboy is 4 miles south of a stream which flows due east. He is also 8 miles west and 7 miles north of his cabin. He wishes to water his horse at the stream and return home. The shortest distance (in miles) he can travel and accomplish this is

$\sqrt{185}$ $\sqrt{16}$ $\sqrt{17}$ $\sqrt{18}$ $\sqrt{32} + \sqrt{137}$

Reasoning + Answer:

<think>

1. Identify Coordinates and Distances: We note the position of the cowboy as follows :

- Let (S) denote the location of the stream .
- Let (C) represent the location of the cowboy .
- Cowboy is (4) miles south of stream .
- He is (8) miles west of east and (7) miles north of his cabin (in total (8) and (7) coordinates flat coordinates), influencing total position making only 2 alert problems need check stream enclose sky .

2. Total Growing Effort Optimal :

3. Calculation Swinger Description :

-
So key locations such central aid .
