

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
One glass costs \$5 and another one costs $60/100 * 5 = \$3$ cheaper.
So if every second glass costs only $60/100 * 5 = \$3$ cheaper, then the second glass costs $5 - 3 = \$2$
To buy 16 glasses Kylar needs to buy $2 * 8 = 16$ glasses.
Kylar needs to pay $8 * 5 + 8 * 2 = 40 + 16 = \56 for all glasses.
</think>
<answer>
56
</answer>
