

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

The human brain development process is a complex and highly orchestrated process , involving the maturation of various brain regions at different stages of fetal development and postnatal growth . At birth , the least developed part of the brain is the cortex . The cortex is the outer layer of the brain responsible for various higher-order functions such as sensory perception , cognition , language , and motor control . It continues to mature and develop significantly after birth , particularly during the first few years of life . In contrast , other brain regions like the brain stem , which controls basic life functions such as breathing and heart rate , are relatively more developed at birth . Therefore , considering the development stages of various brain parts , the cortex is the least matured part after birth .

</think>< answer> G . cortex </answer>
