

Question:

What is aschizo-affectivedisorder ?

Answer Choices:

- A. A schizo-affective disorder is a term used to describe a personality disorder with features similar to both schizophrenia and affective disorders.
- B. A schizo-affective disorder exclusively involves psychotic symptoms without any mood disturbances.
- C. A schizo-affective disorder is a psychological condition where mood disorders occur as a reaction to schizophrenia treatment.
- D. A schizo-affective disorder is characterized by periods of well-being between episodes of schizophrenia and mood disorders.
- E. A schizo-affective disorder is a combination of schizophrenic and affective disorders, where the affective symptoms must develop before or simultaneously with the psychotic symptoms.
- F. A schizo-affective disorder is a subtype of affective disorders.
- G. A schizo-affective disorder is a subtype of schizophrenia.
- H. A schizo-affective disorder develops after the onset of psychosis.
- I. A schizo-affective disorder is a chronic condition with only affective or mood-related symptoms.
- J. A schizo-affective disorder is a mild form of schizophrenia that does not include affective symptoms.

Reasoning + Answer:

<think>

- Schizo-affective disorder (formerly schizoaffective disorder) is a distinct and well-defined diagnostic category in DSM - 5 (and ICD - 11).

- It requires both an episode of significant mood disturbance (de pression , mania , or mixed episode) and at least two weeks of sufficient del usions or halluc inations to meet the core symptom criteria for schizophrenia . The mood episode and psychotic symptoms must be concurrently present , or the psychotic features must persist for at least two weeks while mood symptoms are minimal .

- Its primary defining feature is the required association between mood and psychotic symptoms in time and clinical context , rather than being a personality disorder , acute reaction to treatment , a subtype of schizophrenia , or a separate “mild” form .

Correct answer : E . A schizo-affective disorder is a combination of schizophrenic and affective disorders , where the affective symptoms must develop before or simultaneously with the psychotic symptoms .
