

Question:

Charlie wants to sell beeswax candles. For every pound of beeswax, he can make 10 tapered candles. One pound of beeswax and the wicks cost \$10.00 in supplies. If he sells each candle for \$2.00 each, what is his net profit if he makes and sells 20 candles?

Reasoning + Answer:

<think>Charlie has spent \$10.00 on supplies for 20 candles. He will sell the 20 candles for 20
x \$2 = \$40. Therefore, he will make \$40 - \$10 = \$30 profit. </think><answer>30
