

Question:

John drives for 3 hours at a speed of 60 mph and then turns around because he realizes he forgot something very important at home. He tries to get home in 4 hours but spends the first 2 hours in standstill traffic. He spends the next half-hour driving at a speed of 30mph, before being able to drive the remaining time of the 4 hours going at 80 mph. How far is he from home at the end of those 4 hours?

Reasoning + Answer:

<think>John's original driving took him $3 * 60 = 180$ miles. After stopping he drives for $0.5 * 60 = 30$ minutes before doing the last leg at 80. His driving distance is thus, $180 + (0.5 * 60) + (3 * (60 + 30)) = 240 + 30 + 180 = 450$ miles. Since 240 miles of that were spent driving he is at the $240 / 80 + 1 = 3$ miles from home. </think><answer>3</answer>
