

## Question:

Billy sells DVDs. He has 8 customers on Tuesday. His first 3 customers buy one DVD each. His next 2 customers buy 2 DVDs each. His last 3 customers don't buy any DVDs. How many DVDs did Billy sell on Tuesday?

## Reasoning + Answer:

<think> Billy's first 3 customers buy 1 DVD each = 1 + 1 + 1 = 3 DVDs sold. Billy's next 2 customers buy 2 DVD each = 2 x 2 = 4 DVDs sold. Billy's last 3 customers don't buy any DVDs = 0 DVDs sold. So, Billy sold a total of 3 + 4 + 0 = 7 DVDs on Tuesday. </think> <answer> 7 </answer>
