

Question:

Jean has 30 lollipops. Jean eats 2 of the lollipops. With the remaining lollipops, Jean wants to package 2 lollipops in one bag. How many bags can Jean fill?

Reasoning + Answer:

<think>Jean has 30 lollipops initially, and Jean eats 2 of them, leaving Jean with $30 - 2 = 28$ lollipops. Jean wants to package 2 lollipops per bag. Therefore, the number of bags Jean can fill with the remaining lollipops is $28 / 2 = 14$. </think><answer>14</answer>
