

Question:

Peter plans to go to the movies this week. He always gets a ticket for \$7 and popcorn for \$7. If he has 42 dollars for the week, how many times can he go to the movies?

Reasoning + Answer:

<think>Peter spends \$ 7 on a ticket and \$ 7 on popcorn, so his total weekly expenses for going to the movies is $7 + 7 = 14$ dollars. Peter has 42 dollars for the week and spends 14 dollars going to the movies per session, so he can go to the movies at most $(42 / 14) = 3$ times </think><answer>3</answer>
