

Question:

A treasure hunter found a buried treasure chest filled with gems. There were 175 diamonds, 35 fewer rubies than diamonds, and twice the number of emeralds than the rubies. How many of the gems were there in the chest?

Reasoning + Answer:

<think>There were 175 diamonds in the chest. There were $175 - 35 = 140$ rubies. There were $2 \times 140 = 280$ emeralds. So there were a total of $175 + 140 + 280 = 595$ emeralds in the chest. </think><answer>595</answer>
