

Question:
On Monday, Sue ate 4 times as many cookies as her sister. On Tuesday, she ate twice as many cookies as her sister. Her sister ate 5 cookies on Monday and 13 the next day. If 1 cookie has 200 calories, how many more calories did Sue consume than her sister?

Reasoning + Answer:

<think> Sue ate 5 x 4 = 20 cookies on Monday Sue ate 13 x 2 = 26 cookies on Tuesday
Therefore, Sue ate 20 + 26 = 46 cookies on Monday + Tuesday Sue's sister ate 5 + 13 =
18 cookies on Monday + Tuesday So Sue consumed 46 - 18 = 28 more cookies than her sister
Since 1 cookie has 200 calories, Sue's sister consumed 28 x 200 = 28 x 200 = 5600
calories so it is same 5600 So Sue consumed 5600 x 2 = 11200 calories and Therefore
sue consume - 31200 - 5600, == - 32500 = smmary/int il /myorganism<<102868105>>>gram
