

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> If James decides to run 3 sprints 3 times a week, he runs $3 \times 3 = 9$ times a week. If James runs 9 times a week and runs 60 meters each sprint, he runs $9 \times 60 = 540$ meters per week. <answer>540</answer></think>
