

Question:

A new program had 60 downloads in the first month. The number of downloads in the second month was three times as many as the downloads in the first month, but then reduced by 30% in the third month. How many downloads did the program have total over the three months?

Reasoning + Answer:

<think>The first month the program had 60 downloads. The second month it had three times as many downloads as the first month, i.e., $60 \times 3 = 180$ downloads. The third month, there were 30% less download than in the second month, i.e., $180 - (180 / 10) = 162$ downloads. </think><answer>162</answer>
