

Question:

Cars have lined up on the motorway. Some of the cars drive through in the first 15 minutes of the traffic jam, then 20 more cars drive through in the remaining 15 minutes of the jam. 5 cars from the line take an exit so they don't have to drive through the traffic jam. If there were originally 30 cars on the motorway, how many cars drove through the traffic jam in the first 15 minutes?

Reasoning + Answer:

<think>In the entire 30 minute jam 35 cars drove through, so in the first 15, 15 drove through, and in the remaining 15 20 drove through, so in total $15 + 20 = 35$. There were 5 less than drove through, or $35 = 30 + x$. This means $35 - 5 = 30$ drove through. </think><answer>30</answer>
