

Question:

A new program had 60 downloads in the first month. The number of downloads in the second month was three times as many as the downloads in the first month, but then reduced by 30% in the third month. How many downloads did the program have total over the three months?

Reasoning + Answer:

<think>The number of downloads in the second month is $60 \times 3 = 180$. The number of downloads in the third month is $180 \times 0.3 = 54$ less than the second month. The number of downloads in the third month is $180 - 54 = 126$. The total number of downloads over the three months is $60 + 180 + 126 = 366$. </think><answer>366</answer>
