

Question:

Carlos is planting a lemon tree. The tree will cost \$90 to plant. Each year it will grow 7 lemons, which he can sell for \$1.5 each. It costs \$3 a year to water and feed the tree. How many years will it take before he starts earning money on the lemon tree?

Reasoning + Answer:

<think>The annual income from selling lemons is $\$1.5 \times 7 = \10.5 . The annual cost of water and food is \$3. So, his total yearly profit is $\$10.5 - \$3 = \$7.5$. His total annual cost is \$90, so he will not start earning money until $\$90 / \$7.5 = 12$ years. </think><answer>12</answer>
