

Question:

It's strawberry-picking time on Grandma Concetta's farm. Tony can pick 6 quarts of strawberries per hour, while Bobby picks one less quart of strawberries per hour than Tony. Kathy can pick twice as many strawberries per hour as Bobby, and Ricky picks two fewer quarts of strawberries per hour than does Kathy. In total, how many quarts of strawberries can Tony, Bobby, Ricky, and Kathy pick per hour on Grandma Concetta's farm?

Reasoning + Answer:

<think> Bobby picks 6 quarts. 6 quarts - 1 quart = 5 quarts of strawberries per hour. Kathy picks 5 quarts x 2 = 10 quarts of strawberries per hour. Ricky picks 10 quarts - 2 quarts = 8 quarts of strawberries per hour. Therefore, Tony, Bobby, Ricky, and Kathy can pick together 6 quarts + 5 quarts + 10 quarts + 8 quarts = 29 quarts of strawberries per hour. </think> <answer> 29 </answer>
