

Question:

Mike was a pen pal with 5 people. He stopped being penpals with 2 of them. They each send 2 letters a week that are 5 pages long. He responds in kind. He can write a page every 6 minutes. How many hours does he spend writing a week?

Reasoning + Answer:

<think> He has $5 - 2 = 3$ people to exchange letters with. That means he spends $3 * 2 = 6$ letters each week. That is $6 * 5 = 30$ pages of letters. So he spends $30 / 6 = 5$ hours a week on his pen pals. </think> <answer> 5 </answer>
