

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
150 % of 800 00 is (150 / 100) * 800 00 = 120 000 . So now the value of the house is 800 00 + 120 000 = 200 000
He invested 500 00 in repairs , so his total investment was 800 00 + 500 00 = 130 000
His profit would be 200 000 - 130 000 = 700 00
</think>
< answer > 700 00 </ answer >
