

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Okay , let's break it down . Janet starts with 16 eggs per day . She eats 3 for breakfast and bakes 4 for her friends , that's a total of 7 eggs per day used . To find out how many eggs she has left , we need to subtract 7 from 16 , which leaves her with $16 - 7 = 9$ eggs . Since she sells each egg for \$ 2 , we multiply 9 eggs by \$ 2 to get the daily income . $9 * 2 = 18$. So , she makes \$ 18 every day at the farmers ' market.</think><answer>18</answer>
