

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

He starts with 800 00

He puts in 500 00 so now he has $800\,00 + 500\,00 = 130\,000$

The 150% increase is $1.5 * 800\,00 = 120\,000$

So the increase is $120\,000 - 130\,000 = -100\,000$ which means the value is 100 000 less than what Josh has now

Since he has 130 000 now, he made a profit of $130\,000 - 100\,000 = 300\,00$

</think>

<answer> 300 00 </answer>
