

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

If James runs 3 sprints a week and each sprint is 60 meters , then he runs a total of $3 \times 60 = 180$ meters per week .

</think>

<answer> 180 meters </answer>
