Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How load does it take to download the file?

Reasoning + Answer:

<th ink>
Total size of the file = 200 GB
Carla 's normal downloading rate = 2 GB / minute
Time taken to download the file at the normal rate = Total size / Normal downloading rate = 200 / 2 = 100 minutes
At 40 % of the way , the download pauses for 20 minutes
So , the downloading process was completed in (100 - 20) minutes = 80 minutes before the pause
The total time taken to download the file = Time taken before pause + Time taken after pause = 80 + 20 = 100 minutes
