

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>
200 GB / 2 GB / minute = 100 minutes is the full download time
40 % of 100 minutes is $0.4 * 100 = 40$ minutes
So the download is interrupted after 40 minutes and then 40 minutes are lost
So the download is cancelled and starts again after $40 + 20 = 60$ minutes
The download takes 100 minutes + 60 minutes = 160 minutes

</think>
<answer>
160 minutes is equivalent to $160 / 60 = 8 / 3 = 2$ and $2 / 3$ hours
So it takes 2 and $2 / 3$ hours to download the file.
