

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

the user runs 60 meters for each sprint

the user runs 3 sprints in one day

so, the total meters run in one day is $60 * 3 = 180$ meters

since the user does this 3 times a week, the total meters run in a week is $180 * 3 = 540$ meters

</think>

<answer>

540

</answer>
