

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> <think> the number of eggs eaten as breakfast <think> 3 eggs per day <think> and the number of eggs used for baking muffins <think> 4 eggs per day <think> both subtract from the total of 16 <think> so <think> 16 total - 3 eaten - 4 used = 9 remaining <think> that's <think> the eggs left over from meals that she sells <think> and the price per egg <think> 2 dollars per egg <think> so <think> the sale <think> she makes <think> 9 eggs times <think> 2 dollars per egg <think> equals <think> the total income <think> from the farmer's market every day <think> is <think> 18 </think> </think> </think> <answer>18 </answer> </think>
