

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> the total meters he runs per week is the product of the sum of all the sprints he ran in a week, which is <think> 3 sprints * 3 week = 9 sprints </think> and the length of each sprint <think> 60 meters </think>. Therefore the total meters he runs per week is <think> 9 * 60 = 540 meters </think> </think> <answer> 540 </answer> meters. </answer>
