

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

the total cost Josh spent on the house is the sum of the purchase price and the repair cost , which is $80\,000 + 50\,000 = 130\,000$

the increase in value is calculated by taking 150% of the original purchase price , which is $80\,000 * 1.5 = 120\,000$

thus , the new value after the renovation is the original value + the increase in value , which is $80\,000 + 120\,000 = 200\,000$

the profit he made is the final value - the total spent , which is $200\,000 - 130\,000 = 70\,000$

</think>

<answer>70000</answer>
