

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
She takes 3 eggs from 16 to get $16 - 3 = 13$
Each day, after taking 3, she sells the remainder which is 13.
It is noted that a dozen contains 12 eggs and one duck sells at \$2 so Janet makes \$2 per 12 eggs.
This is $13 / 12$ dozen which equals $13 / 12 * 2 = \$2.17$.
So she makes \$2.17 every day.
</think>
<answer>2.17</answer>
