

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>The total distance James runs per session is <think> $3 * 60 = 180$ </think> meters . He runs 180 meters per session 3 times a week , which makes the total distance he runs in a week <think>180 * 3 = 540</think>. </think><answer>540</answer> meters .
