

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
Janet has <think>
16 <think> eggs laid per day </think>. She eats <think> 3 </think> eggs for breakfast and bakes
<think> 4 </think> eggs into muffins. So, the total number of eggs used for breakfast and muffins
is <think> $3 + 4 = 7$ </think>. We then subtract these from the total number of eggs laid to get the
number of eggs sold: <think> $16 - 7 = 9$ </think>. As she sells the remainder at \$2 per egg, the total
money she makes is <think> $9 * 2 = 18$ </think>.
</think>
<answer>18</answer>
