

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
James runs 3 sprints every day which is a total of <think>
 $3 * 60 = 180$ meters </think> per day .
Since he runs 3 times a week , the total number of meters he runs a week is <think>
 $180 * 3 = 540$ meters </think> .
</think>
<answer>
 540 </answer> meters .
