

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
the value of the house increased to $\$80,000 * 150\%$, which means it has increased by $150/100 * 80,000 = \$120,000$
therefore, it means that the new value of the house after the investment is $80,000 + 120,000 = \$200,000$
the profit he gained from his investment would be $200,000 - (80,000 + 50,000) = \$70,000$
</think>
<answer>
70000</answer>
