

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>The total meters he run per sprint <think> is 60 meters and since he runs three sprints <think> it's $60 * 3 = 180$ meters. This is done thrice a week so the total will be $180 * 3 = 540$ meters run in a week.</think><answer>540</answer>
