

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> To determine how much Janet makes at the farmers ' market each day , we need to follow these steps :

- 1 . Calculate the number of eggs remaining daily after Janet eats three for breakfast .
- 2 . Identify the total number of eggs sold at the farmers ' market .

For the first step , let's start with the daily eggs produced :

<think> Janet's ducks lay 16 eggs per day , and she eats 3 eggs every morning . Therefore , the number of eggs left for the farmers ' market would be $16 - 3 = 13$. </think>

To get the total number of eggs sold at the farmers ' market Janet sells , let's subtract the 3 eggs :

<think> The 16 eggs initially laid are minus the 3 eggs Janet consumes , leaving 13 eggs for sale at the market . </think>

To earn money at the market , she sells these remaining 13 eggs :

<think> She makes 13 dollars when she sells each of her ducks ' eggs at 2 dollars for each . Therefore , at the market , the amount she makes is 13 . </think>

<answer> 13 </answer>
