

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
Cost of house = \$80,000
Cost of repairs = \$50,000
Total cost = 80,000 + 50,000 = \$130,000
Value increase = 150% of original cost = 1.5 * \$80,000 = \$120,000
New value of house = Original cost + Value increase = 80,000 + 120,000 = \$200,000
Profit = Final selling price - Total cost of house and repairs = 200,000 - 130,000 = \$70,000
</think>
<answer>70000</answer>
