

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

Let's break down the problem step by step .

1. ****Determine the distance run in one sprint : ****

- James runs 60 meters in one sprint .

2. ****Determine the distance run in one session : ****

- He does 3 sprints in one session .

- Therefore , the distance for one session is :

$$\begin{aligned} & \backslash[\\ & 60 \backslash, \text{ meters/s print } \backslash \times 3 \backslash, \text{ s prints/session } = 180 \backslash, \text{ meters/session } \\ & \backslash] \end{aligned}$$

3. ****Determine the distance run in one week : ****

- James runs 3 sessions per week .

- Therefore , the total distance for the week is :

$$\begin{aligned} & \backslash[\\ & 180 \backslash, \text{ meters/session } \backslash \times 3 \backslash, \text{ sessions/week } = 540 \backslash, \text{ meters/week } \\ & \backslash] \end{aligned}$$

<think> We have calculated the total distance James runs in a week . </think>

<answer> 540 meters </answer>
