

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
The feedback loop that regulates the production of sex hormones , particularly testosterone , in males involves the hypothalamus , which secretes gonadotropin-releasing hormone (GnRH). GnRH then stimulates the pituitary gland to release follicle-stimulating hormone (FSH) and luteinizing hormone (LH). These hormones , in turn , affect the gonads , specifically the testes , to regulate testosterone production . Oxytocin does play a role in the feedback loop of the reproductive system but is primarily involved in social behaviors and childbirth . It is not directly involved in the feedback loop regulating testosterone production .
