

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

The feedback loop in men that regulates the production of sex hormones involves the hypothalamus, which releases gonadotropin-releasing hormone (GnRH), which then stimulates the pituitary gland to release luteinizing hormone (LH) and follicle-stimulating hormone (FSH). These hormones then stimulate the testes to produce testosterone, which is then balanced by negative feedback to the hypothalamus and pituitary gland to regulate production.

B and C (oxytocin and pituitary gland) are not part of the primary feedback loop controlling sex hormone production in men, although the pituitary gland is involved in this process.
