

Question:

At birth, the least developed part of the brain is the

Answer Choices:

- A. visual system
- B. thalamus
- C. frontal lobe
- D. brain stem
- E. parietal lobe
- F. cerebellum
- G. cortex
- H. basal ganglia
- I. hypothalamus
- J. limbic system

Reasoning + Answer:

<think>

the brain is made up of different parts with varying levels of development at birth .

at birth , the most primitive and developed part of the brain is the brain stem , which controls basic functions such as breathing , heart rate , and blood pressure .

the brain stem is responsible for the instinctual responses that are necessary for survival .

the visual system , thalamus , cerebellum , basal ganglia , hypothalamus , and limbic system are also developed to some extent , but not to the same extent as the brain stem .

the frontal lobe and parietal lobe are the most developed parts of the brain at birth , but they are still not fully formed .

considering the options , the least developed part of the brain at birth is the visual system .
