

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> Being African or Hispanic American , living in a city , being married , and eating fish are some lifestyle and social factors that have been associated with a reduced risk of Alzheimer's . A lower level of education , older age , and having a family history of Alzheimer's are associated with an increased risk , and being a smoker and drinking alcohol regularly are also risk factors . High intake of saturated fats is a risk factor for Alzheimer's . Being married , which is a form of social engagement and emotional well-being , can contribute to a lower risk . Eating fish , which provides omega - 3 fatty acids beneficial for brain health , is also a factor . </think>

<answer> H </answer>
