

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>
- The feedback loop for sex hormone production is controlled by the hypothalamus and pituitary gland , releasing hormones that regulate the gonads .

- The pituitary gland secretes luteinizing hormone and follicle-stimulating hormone .

- The hypothalamus secretes gonadotropin-releasing hormone .

- The gonads (testes in men) produce testosterone in response to these hormones , and testosterone itself can feedback to hypothalamus and pituitary .

- Oxytocin is not involved in this feedback loop for sex hormone production ; it's involved in different processes like milk ejection and uterine contractions .

Therefore , oxytocin is the answer here as it's not part of the sex hormone production feedback loop .

</think>

< answer >B </answer>
