

Question:

What is the de Broglie wavelength of an electron with a kineticenergy of 1eV?

Answer Choices:

- A. 2.48×10^{-8} cm
- B. 5.92×10^7 cm/sec
- C. 8.66×10^{-6} cm
- D. 3.14×10^{-5} cm
- E. 9.81×10^{-4} cm
- F. 5.27×10^{-9} m
- G. 1.23×10^{-7} cm
- H. 4.14×10^{-10} m
- I. 6.625×10^{-27} erg sec
- J. 0.512×10^6 eV

Reasoning + Answer:

<think>

- We first convert 1 eV to joule , $1\text{ eV} = 1.6 \times 10^{-19}\text{ J}$.
- $\lambda = h / \sqrt{2 m E}$ - λ = Plank's constant over $\sqrt{2 * m * KE}$.
- Putting the values : $h = 6.625 \times 10^{-34}\text{ Js}$, $m = 9.11 \times 10^{-31}\text{ kg}$, $KE = 1.6 \times 10^{-19}\text{ J}$, into the relation .
- $\lambda = 6.625 \times 10^{-34} / \sqrt{2 * 9.11 \times 10^{-31} * 1.6 \times 10^{-19}}$
- Approx calculation gives $1.23 \times 10^{-7}\text{ cm}$.

</think>

<answer> $1.23 \times 10^{-7}\text{ cm}$ </answer>
