

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> The risk factors for Alzheimer's disease are complex , but some studies show that being married and drinking alcohol regularly have been associated with a reduced risk of Alzheimer's disease . So , one could infer that being married and drinking alcohol regularly may be factors associated with a decreased risk of Alzheimer's .

</think><answer> Being married </answer>
