

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
3 sprints 3 times a week is $3 * 3 = 9$ sprints in a week
He runs 60 meters in each sprint
Total meters = $9 \text{ sprints} * 60 \text{ meters} = 540 \text{ meters}$
</think>
<answer>
540 meters </answer>
